Version 1.0.2.3

Releasedate: March 2025

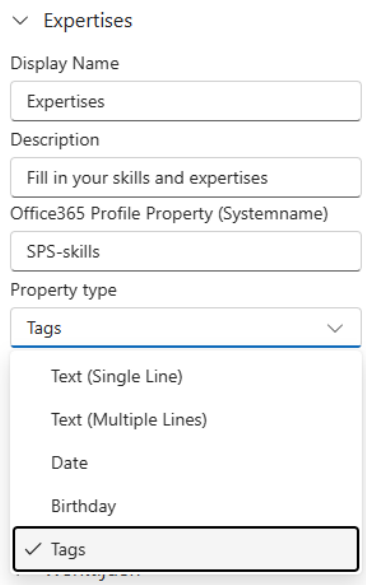

Webpart	Type	Description
People finder	New Feature	Filters have been added to the People finder. This allows you to filter Searchresults. Filter Colleagues based on their Jobtitle, Department, or other Profile Properties.
<p>Facebook</p> 		
People finder	Improvement	Searchterms no longer need to be fully written out. Even searchqueries with incomplete words will now lead in results.

Version 1.0.2.0

Releasedate: January 2025

Webpart	Type	Description
People finder	Improvement	Various improvements in performance have been implemented. This ensures that Searchresults load faster. The improvement is particularly noticeable when larger quantities of profiles are loaded, for example when the Peoplefinder is used as Facebook.
People finder	Improvement	The Layout has been updated, providing a modern look. This also concerns the way Out of Office updates are displayed.
Profile editor	Improvement	The entire Layout has been updated, providing a modern look.
Profile editor	Improvement	While configuring the web part, the overview has been improved as the various configured profile properties are now displayed collapsed by default. Each profile property can be expanded to make adjustments.
Profile editor	New feature	The side panel for entering and editing profile information has been replaced with a pop-up that appears in the center of the screen.
Profile editor	New feature	Profile Properties that are based on 'Tags', such as Interests and Skills, now have their own 'Property Type' within the Profile editor webpart. This allows users to actually fill in these Properties with Tags.

		<p>Configuration instructions: If you've already configured 'Tag Properties' you have to change the settings for these Properties as following:</p> <ol style="list-style-type: none">1. Open your SharePoint Site in edit-mode and go the Profile Editor webpart settings.2. Unfold the Profile Property that uses Tags, change the 'Property type' to 'Tags' and click 'Save'.3. Republish your SharePoint Site.

Version 1.0.1.10

Releasedate: 13 September 2024

Type	Description
Bugfix	The Out of Office Notifications are now hidden from the Birthday webpart.
Bugfix	Fixed the issue that the Profilecards wouldn't open from the Birthday webpart after clicking on a person.
Bugfix	Fixed an issue in the People Webpart that caused an error after trying to view more than 10 Searchresults.

Version 1.0.1.9

Releasedate: 4 September 2024

Type	Description
Bugfix	Fixed an issue that caused Birthdays not to be Displayed in the Birthday webpart.

Version 1.0.1.8

Summary: Release 1.0.1.8 of Intraverse is a major release that brings lots of cool new features and introduces a brand new experience for configuring the widgets on your SharePoint Sites and Sitepages.

Tip: Make sure to back-up you're AdaptiveCard payloads when upgrading from an older version. Need help configuring Intraverse? All of the new and improved features are documented in the Manual that is (from now on) available in Dutch and English.

Releasedate: 29 August 2024

Type	Description
General	Added English Language Support
Improvement	We've introduced a seperate widget to display Birthdays, which simplifies the birthday configuration.
Improvement	You can now adjust the amount of results displayed in the Intraverse People-Widget.
Improvement	Intraverse no longer uses only a predefined set of Properties from the SharePoint User Profile Service. Next to the predefined set, you're now able to configure Properties according to your own wishes. This includes Properties you've manually added to the SharePoint Users Profile Service. We've developed a brand new screen to manage all the Properties to use within Intraverse. Added fiels are used withing searchqueries and for displaying in the Searchresults.
Improvement	Added predifined Views to the Intraverse People-widget, which makes it easy and fast to configure. Ofcourse it's still possible to customize the View to your own needs with the possibility to add your own AdaptiveCard design.
Improvement	If you choose to insert a custom AdaptiveCard payload, you can now do this from within a new Json Editor.

New feature	We've introduced the possibility to choose your preferred sorting order. By default the property 'First name' is selected with the sorting order 'ascending'. From within a new screen, you can now select a preferred Property and choose whether you want the sorting order for this property 'ascending' or 'descending'.
New feature	By adding the possibility to 'Search from start' to the People-widget, combined with the possibility to adjust the amount of search results, you can now use the IntraVerse People-widget as an Facebook for your organization
New feature	Adjustable Filterquery support is added to the IntraVerse People-widget. Add a filterquery and display matching user profiles. For example to view only User profiles matching a certain Jobtitle, Department or Expertise. Tip: Combined with the new feature to search at start, this can be used as a replacement for the standard SharePoint People-widget in certain scenarios.
Bugfix	Fixed an issue where the 'no valid license' was shown at the moment when IntraVerse is validating the license.
Bugfix	We have fixed the issue that caused birthdays not to be displayed around the turn of the year. This issue was also known as the 'millennium bug'.

Version 1.0.1.3

Releasedate: 24-04-2024

Type	Description
General	Improved the message that is displayed when no subscription is found after adding IntraVerse webparts to your SharePoint Site

Version 1.0.1.2

Releasedate: 18-03-2024

Type	Description
Bugfix	When the UPN and Email of a user profile in EntraID are different, the Peoplefinder Webpart shows a blank page as Profilecard. This issue is fixed.
